SUMMARY

- Computer Science undergraduate focused on backend and cloud engineering, with hands-on experience in Go, Python, C#, AWS, and Terraform.
- Improved core API latency by 42% at Boeing Korea, built automated testing with 750+ tests at PTKorea, and contributed to open-source Go projects including Cadence Workflow and Semantic Router.

SKILLS

- Languages:** Python, Go, C#, SQL
- Frameworks/Libraries:** FastAPI, ASP.NET, Django, Pytest, Github Actions, Docker
- Cloud:** AWS, Terraform, CloudFormation

CERTIFICATIONS

AWS ANS, AWS SAA, CCNA, TOEIC SPEAKING IH

EXPERIENCE

Cloud System Software Engineer Intern

Oct 2025 ~ Mar 2026

Boeing

Seoul, Korea

- Core API Optimization:** Reduced table-view batch query latency by **42% (2046ms to 1189ms)** by adding composite indexes and refactoring Entity Framework generated SQL (converting SELECT subqueries to JOIN/EXISTS), minimizing database round-trips on **ASP.NET** backend system.
- Graph UI Optimization:** Improved graph rendering speed by **20%** by optimizing DTOs and migrating client-side operations to the server. Implemented topological sorting using the **Dagre** library to clearly visualize complex workflow dependencies on **Blazor** UI component.
- AI Workflow Integration:** Implemented CPU fallback logic for a GPU-optimized AI workflow, enabling deployment in a CPU-only cloud environment. Rebuilt the Dockerfile using an internally certified base image and supported an international demo session.

Python Developer Intern

Jun 2025 ~ Sep 2025

PTKorea

Seoul, Korea

- Test Development:** Established an automated testing pipeline from scratch and developed **750+ Pytest unit/integration tests**, increasing test coverage to **76%** for a **FastAPI** backend system.

Backend AI Integration Assistant

Sep 2024 ~ Jun 2025

System Software Laboratory, Soongsil University

Seoul, Korea

- Backend Development:** Built **FastAPI** backend for a font generation web application, integrating asynchronous AI workflows with **Celery**.
- AI Integration:** Integrated multiple font generation AI models with internal backend system and standardized APIs for model execution.

PROJECTS

Single Sign-On service | Go, AWS Serverless

Ongoing

- Architected a serverless SSO service for 4 internal services, migrating the architecture from Python to **Go** to reduce Lambda cold-start latency and ensure rapid authentication responses.
- Engineered a database synchronization pipeline to update legacy user data without impacting login latency, ensuring idempotency with unique constraints and transactional consistency.
- Maintained **124ms average authentication APIs latency** during a two-week scholarship application period, with no reported service interruptions in **Grafana** dashboard.

AWS infrastructure management | AWS, Terraform, CloudFormation

Ongoing

- Reduced monthly infrastructure costs by **45% (\$203.32 to \$112.93)** to meet strict budget constraints by migrating to **ARM64** (Graviton), removing idle RDS/EC2 resources, **migrating RDS database to EC2** and consolidating dev environments into a single **Spot** instance.
- Hardened infrastructure security by replacing SSH key-based access with audited **AWS Systems Manager Session Manager** access, enforcing IMDSv2, and applying least-privilege security group rules.
- Managed and deployed AWS infrastructure via **Terraform** and **CloudFormation** for management efficiency, integrating pre-commit hooks (checkov, tfint) to enforce deployment security and code quality.

Open source contributions | Go

Ongoing

- Contributed to the open-source **Cadence** by refactoring custom rate limiter, implementing dynamic configuration, removing synchronous retry logic, and applying context timeouts for an open-source distributed business logic orchestration engine.
- Improved **Semantic Router** (open-source system level AI model router) by deprecating legacy cache options and implementing file-based cache configuration.
- Contributed to the open-source **EZ** language by adding HTTP status code constants and fixing a bug in the 'using' keyword functionality.

EDUCATION

Soongsil University

B.S. COMPUTER SCIENCE (3.79/4.5 GPA)

2022.03 ~ 2027.02
